

Our productivity is up by 32.9%

Delta Flight Attendant productivity from 2001–2013, measured in number of passengers per Flight Attendant, increased by almost one third.

Adjusted for inflation, our average annual salary is down by 11.3%

In real dollars (pay adjusted for inflation), Delta Flight Attendant's average annual salaries during the same period of 2001–2013 actually went down.

Where's it hiding?

A very basic concept in economics says that when productivity rises, pay should rise at least as fast. Why hasn't this happened for us?
